HCTEA receives national award

The Hutchinson Career and Technical Education Academy has been selected as an Outstanding Technology Centers That Work (TCTW) Center. This award is based on the success of center leaders and teachers in improving center practices and increasing the quality of experiences provided to students.

The award was presented by Dave Spence, president of the Southern Regional Education Board (SREB), at the 27th Annual High Schools That Work Staff Development Conference in Charlotte, North Carolina, on Wednesday, July 17.

Spence praised the center for its achievement, pointing out that it takes dedication and hard work on the part of technology center leaders and teachers to make progress in preparing students for college and careers in an increasingly competitive world. He presented the award before an audience of more than 4,000 educators from across the nation attending the HSTW Conference.

"When looking at the criteria I believe we have been nominated due to our implementation efforts of the TCTW framework at HCTEA and our collaborative efforts with Hutchinson Community College," said David T. Patterson, director of HCTEA. "It is an enormous honor to be chosen for this award by your peers at the national level. My hope is to build on this recognition as we move forward to meet the needs of our students and workforce."

HCTEA was one of only nine TCTW centers in the nation to receive the 2013 Outstanding Center Award. To be recognized for the national award, a center had to be nominated by the TCTW state coordinator or by an Southern Regional Education Board director for a noteworthy accomplishment such as improving achievement, improving graduation rates, improving college and career readiness, improving the quality of career and technical offerings and robust assignments, fully implementing the TCTW design, implementing a signature feature, or extensively implementing the Gates' Literacy Design Collaborative and/or Mathematics Design Collaborative.

"This center has shown what can be accomplished to improve student performance and readiness for college and careers by deeply implementing the TCTW model for strengthening curriculum and instruction," said Gene Bottoms, SREB senior vice president. "The center illustrates the spirit of change that Technology Centers That Work advocates and supports through assessment, staff development and technical assistance."

TCTW was established in 2007 to assist shared-time career/technology centers in improving student achievement and producing graduates who can excel in high-demand, high-skill, high-wage career fields. The TCTW design is based on the High Schools That Work design, with modifications that address the specific needs of shared-time centers. More than 190 centers in 18 states participate in activities to promote increased academic performance.

Kim Mitchell

KSDE CTE Consultant of the Quarter

FYI.....Kim has accepted a teaching position (Agriculture) at Royal Valley High School. She has always been a "bright spot" during her time at KSDE. We are going to miss her so very much! Kim is a wonderful educator who always goes the extra mile. Good luck to Kim!

Wendy Pickell will be serving as the interim consultant for Health Science and HOSA until the position is filled.

HCTEA receives national award

The Hutchinson Career and Technical Education Academy has been selected as an Outstanding Technology Centers That Work (TCTW) Center. This award is based on the success of center leaders and teachers in improving center practices and increasing the quality of experiences provided to students.

The award was presented by Dave Spence, president of the Southern Regional Education Board (SREB), at the 27th Annual High Schools That Work Staff Development Conference in Charlotte, North Carolina, on Wednesday, July 17.

Spence praised the center for its achievement, pointing out that it takes dedication and hard work on the part of technology center leaders and teachers to make progress in preparing students for college and careers in an increasingly competitive world. He presented the award before an audience of more than 4,000 educators from across the nation attending the HSTW Conference.

"When looking at the criteria I believe we have been nominated due to our implementation efforts of the TCTW framework at HCTEA and our collaborative efforts with Hutchinson Community College," said David T. Patterson, director of HCTEA. "It is an enormous honor to be chosen for this award by your peers at the national level. My hope is to build on this recognition as we move forward to meet the needs of our students and workforce."

HCTEA was one of only nine TCTW centers in the nation to receive the 2013 Outstanding Center Award. To be recognized for the national award, a center had to be nominated by the TCTW state coordinator or by an Southern Regional Education Board director for a noteworthy accomplishment such as improving achievement, improving graduation rates, improving college and career readiness, improving the quality of career and technical offerings and robust assignments, fully implementing the TCTW design, implementing a signature feature, or extensively implementing the Gates' Literacy Design Collaborative and/or Mathematics Design Collaborative.

"This center has shown what can be accomplished to improve student performance and readiness for college and careers by deeply implementing the TCTW model for strengthening curriculum and instruction," said Gene Bottoms, SREB senior vice president. "The center illustrates the spirit of change that Technology Centers That Work advocates and supports through assessment, staff development and technical assistance."

TCTW was established in 2007 to assist shared-time career/technology centers in improving student achievement and producing graduates who can excel in high-demand, high-skill, high-wage career fields. The TCTW design is based on the High Schools That Work design, with modifications that address the specific needs of shared-time centers. More than 190 centers in 18 states participate in activities to promote increased academic performance.

Kim Mitchell

KSDE CTE Consultant of the Quarter

FYI.....Kim has accepted a teaching position (Agriculture) at Royal Valley High School. She has always been a "bright spot" during her time at KSDE. We are going to miss her so very much! Kim is a wonderful educator who always goes the extra mile. Good luck to Kim!

Wendy Pickell will be serving as the interim consultant for Health Science and HOSA until the position is filled.

The Hutchinson Career and Technical Education Academy has been selected as an Outstanding Technology Centers That Work (TCTW) Center. This award is based on the success of center leaders and teachers in improving center practices and increasing the quality of experiences provided to students.

The award was presented by Dave Spence, president of the Southern Regional Education Board (SREB), at the 27th Annual High Schools That Work Staff Development Conference in Charlotte, North Carolina, on Wednesday, July 17.

Spence praised the center for its achievement, pointing out that it takes dedication and hard work on the part of technology center leaders and teachers to make progress in preparing students for college and careers in an increasingly competitive world. He presented the award before an audience of more than 4,000 educators from across the nation attending the HSTW Conference.

"When looking at the criteria I believe we have been nominated due to our implementation efforts of the TCTW framework at HCTEA and our collaborative efforts with Hutchinson Community College," said David T. Patterson, director of HCTEA. "It is an enormous honor to be chosen for this award by your peers at the national level. My hope is to build on this recognition as we move forward to meet the needs of our students and workforce."

HCTEA was one of only nine TCTW centers in the nation to receive the 2013 Outstanding Center Award. To be recognized for the national award, a center had to be nominated by the TCTW state coordinator or by an Southern Regional Education Board director for a noteworthy accomplishment such as improving achievement, improving graduation rates, improving college and career readiness, improving the quality of career and technical offerings and robust assignments, fully implementing the TCTW design, implementing a signature feature, or extensively implementing the Gates' Literacy Design Collaborative and/or Mathematics Design Collaborative.

"This center has shown what can be accomplished to improve student performance and readiness for college and careers by deeply implementing the TCTW model for strengthening curriculum and instruction," said Gene Bottoms, SREB senior vice president. "The center illustrates the spirit of change that Technology Centers That Work advocates and supports through assessment, staff development and technical assistance."

TCTW was established in 2007 to assist shared-time career/technology centers in improving student achievement and producing graduates who can excel in high-demand, high-skill, high-wage career fields. The TCTW design is based on the High Schools That Work design, with modifications that address the specific needs of shared-time centers. More than 190 centers in 18 states participate in activities to promote increased academic performance.

Kim Mitchell

KSDE CTE Consultant of the Quarter

FYI.....Kim has accepted a teaching position (Agriculture) at Royal Valley High School. She has always been a "bright spot" during her time at KSDE. We are going to miss her so very much! Kim is a wonderful educator who always goes the extra mile. Good luck to Kim!

Wendy Pickell will be serving as the interim consultant for Health Science and HOSA until the position is filled.

The award was presented by Dave Spence, president of the Southern Regional Education Board (SREB), at the 27th Annual High Schools That Work Staff Development Conference in Charlotte, North Carolina, on Wednesday, July 17.

Spence praised the center for its achievement, pointing out that it takes dedication and hard work on the part of technology center leaders and teachers to make progress in preparing students for college and careers in an increasingly competitive world. He presented the award before an audience of more than 4,000 educators from across the nation attending the HSTW Conference.

"When looking at the criteria I believe we have been nominated due to our implementation efforts of the TCTW framework at HCTEA and our collaborative efforts with Hutchinson Community College," said David T. Patterson, director of HCTEA. "It is an enormous honor to be chosen for this award by your peers at the national level. My hope is to build on this recognition as we move forward to meet the needs of our students and workforce."

HCTEA was one of only nine TCTW centers in the nation to receive the 2013 Outstanding Center Award. To be recognized for the national award, a center had to be nominated by the TCTW state coordinator or by an Southern Regional Education Board director for a noteworthy accomplishment such as improving achievement, improving graduation rates, improving college and career readiness, improving the quality of career and technical offerings and robust assignments, fully implementing the TCTW design, implementing a signature feature, or extensively implementing the Gates' Literacy Design Collaborative and/or Mathematics Design Collaborative.

"This center has shown what can be accomplished to improve student performance and readiness for college and careers by deeply implementing the TCTW model for strengthening curriculum and instruction," said Gene Bottoms, SREB senior vice president. "The center illustrates the spirit of change that Technology Centers That Work advocates and supports through assessment, staff development and technical assistance."

TCTW was established in 2007 to assist shared-time career/technology centers in improving student achievement and producing graduates who can excel in high-demand, high-skill, high-wage career fields. The TCTW design is based on the High Schools That Work design, with modifications that address the specific needs of shared-time centers. More than 190 centers in 18 states participate in activities to promote increased academic performance.

Kim Mitchell

KSDE CTE Consultant of the Quarter

FYI.....Kim has accepted a teaching position (Agriculture) at Royal Valley High School. She has always been a "bright spot" during her time at KSDE. We are going to miss her so very much! Kim is a wonderful educator who always goes the extra mile. Good luck to Kim!

Wendy Pickell will be serving as the interim consultant for Health Science and HOSA until the position is filled.
