When reviewing graduation rates, the current four-year rate should be compared to the previous four-year rate and the current five-year rate should be compared to the previous five-year rate. It is not appropriate to compare the current four-year rate to the current five-year rate. This is because the current four- and five-year rates both ended in 2018, with the four-year rate starting four years earlier and the five-year rate starting five years earlier.

The adjusted cohort graduation rates reflect the percentage of students in a cohort, adjusted for transfers into and out of the school, district, or state, who graduate with a regular high school diploma within four or five years of entering high school.

The dropout rate is calculated annually and reflects the number of seventh– twelfth grade students who drop out in any one school year. A dropout is any student who exits school between October 1 and September 30 with a dropout EXIT code AND does not re-enroll in school by September 30. The dropout rate is not the inverse of the graduation rate.
