Updated Interim Report with Cluster Mapping

Spring Testing Window – January 31-February 11
New Interim Cluster Report

This table shows how your students performed on each question and by cluster in this year’s interim assessment. For the interim questions not administered, student performances were left blank with a ‘--’. The District PCT column reports the percentage of students who earned full or partial credit on each question. For comparison, the State PCT column reflects the number of students out of 100 who earned full or partial credit on each question during the previous year interim assessment. Higher PCT values indicate an easier question; lower values indicate a more difficult question. The cluster average is the average PCT of items measuring the same cluster weighted by number of students taking each item. Because different items measure the same cluster across windows, the cluster average across windows cannot be compared.

Educator Focus Groups on Interim Predictive Score Report - Interpretive Guide

• **Purpose**: to evaluate usability of and get stakeholder feedback on interpretive guides designed to support use of spring 2022 enhanced interim predictive score reports.

• The focus groups will take place online via Zoom between February 14-25, 2022 and will last approximately one hour.

• Currently recruiting participants for the focus groups and seek participants whose districts have used the KAP interim predictive assessments in the past as well as brand new users.

• If you are interested in participating, please contact KAP@ku.edu or jewing@ksde.org by January 31, 2022.
