

Exploring Options for Consolidating Kansas School Districts: An Overview

## Legislative Post Audit Committee

## Legislative Division of Post Audit

THE LEGISLATIVE POST Audit Committee and its audit agency, the Legislative Division of Post Audit, are the audit arm of Kansas government. The programs and activities of State government now cost about $\$ 6$ billion a year. As legislators and administrators try increasingly to allocate tax dollars effectively and make government work more efficiently, they need information to evaluate the work of governmental agencies. The audit work performed by Legislative Post Audit helps provide that information.

We conduct our audit work in accordance with applicable government auditing standards set forth by the U.S. General Accounting Office. These standards pertain to the auditor's professional qualifications, the quality of the audit work, and the characteristics of professional and meaningful reports. The standards also have been endorsed by the American Institute of Certified Public Accountants and adopted by the Legislative Post Audit Committee.

The Legislative Post Audit Committee is a bipartisan committee comprising five senators and five representatives. Of the Senate members, three are appointed by the President of the Senate and two are appointed by the Senate Minority Leader. Of the Representatives, three are appointed by the Speaker of the House and two are appointed by the Minority Leader.

Audits are performed at the direction of the Legislative Post Audit Committee. Legislators or
committees should make their requests for performance audits through the Chairman or any other member of the Committee. Copies of all completed performance audits are available from the Division's office.

# EXPLORING OPTIONS FOR CONSOLIDATING KANSAS SCHOOL DISTRICTS: AN OVERVIEW 

Summary of Legislative Post Audit's Findings

How do the characteristics of school districts in Kansas compare with districts in other states? In 1989-90, Kansas' 304 school districts averaged 1,417 students per district, or less than half the national median of 2,883 . Kansas had more school districts, with lower enrollment per district and per school, than most other states. Kansas also had smaller classes, on average, than all but 10 other states. As expected with small classes and small schools, Kansas had higher than average staffing levels of teachers, administrators, and total staff. Despite these factors, Kansas' spending per student was slightly less than the national median, mainly because Kansas' average teacher salary was below the median. If Kansas had been equal to the median of seven similar states in 1989-90, Kansas would have had 2.6 more students per class, 4,200 fewer teachers, 370 fewer schools, and would have spent $\$ 127$ million less to operate its school system.

To what extent does the enrollment level in Kansas school districts affect the average expenditures and administrative costs per student, and why? School district enrollment is a major factor influencing all types of expenditures per student. As a rule, the smaller a school district's enrollment is, the higher its expenditures per student are. As enrollment increases, expenditures per student drop rapidly and then level off. In 1990-91, the districts that spent the least per student had enrollments between 1,600 and 4,300 students. The key factor in lower expenditures per student appeared to be higher average class sizes. The 20 school districts with the lowest expenditures per student had average class sizes of 16-20 students; the 20 districts with the highest expenditures all had enrollments of fewer than 400 students and had average classes of 6-10 students. These small school districts appeared to have few options to increase their average class sizes and still meet the curriculum requirements imposed on all districts.

Have other states found that consolidating school districts resulted in cost savings? The states we surveyed and the articles published on this subject generally reported that consolidating school districts may result in minor savings in administrative costs, but significant savings will occur only when schools are closed, class sizes are increased, and the number of teachers is reduced. The states we surveyed had not required districts to consolidate, but had encouraged consolidation through financial incentives or through expanded curriculum and staffing requirements.

We would be happy to discuss the findings presented in this report with any legislative committees, individual legislators, or other State officials. These findings are supported by a wealth of data, not all of which could be included in this report because of space considerations. These data may allow us to answer additional questions about the audit findings or to further clarify the issues raised in this report.

# Exploring Options for Consolidating Kansas School Districts: An Overview 

The State of Kansas is now divided into 304 school districts, each of which is governed by a locally elected school board. In recent years, Statewide school enrollment has stabilized while costs have continued to rise. For example, between 1980 and 1990, enrollments stayed about the same while districts' general fund expenditures more than doubled. Total General Fund State aid to school districts increased by 97 percent, from $\$ 375$ million to $\$ 738$ million, during that 10-year period.

Because of concerns about the growth in school district costs, especially in these times of budgetary constraints, legislative questions have been raised about the possibility of consolidating unified school districts to provide more cost-efficient or economical public education. The last major consolidation of school districts in Kansas occurred in the 1960s. The subject of school district consolidation was most recently raised during discussions about the school finance package passed by the 1992 Legislature, but the Legislature did not directly address the subject of consolidation in any 1992 legislation.

To address these concerns, the Legislative Post Audit Committee authorized a performance audit to answer the following questions:

1. How do the characteristics of school districts in Kansas compare with districts in other states?
2. To what extent does the enrollment level in Kansas school districts affect the average expenditures per student and administrative costs per student, and why?

## 3. Have other states found that consolidating school districts resulted in cost savings?

To answer the first question, we reviewed national education statistics to determine how Kansas compared with other states in elementary and secondary school enrollment, staffing, funding sources, and expenditures per student. Throughout this report, we used expenditures per student as the basic measure of cost-efficiency. This report does not address the quality of educational services provided by school districts; quality issues were examined in our January 1991 report, Analyzing the Relationships Between Funding Levels and the Quality of Education in Kansas School Districts.

To address the second question, we performed a variety of statistical analyses to explore the relationship between Kansas school district enrollments and average expen-
ditures per student. In the search for which factors have the strongest influence on expenditures per student, we looked at a long list of variables including district enrollment, average class size, average school size, average salary levels, various staffing ratios, and geographic area. We did not focus on any specific school districts in conducting this audit, but looked at the data across all Kansas districts.

To address the third question, we contacted a sample of other states that had reduced the total number of school districts during the last 10 years to determine whether the decrease in the number of school districts had a significant impact on education expenditures. We also reviewed published studies concerning cost savings from school district consolidation.

In general, we found that Kansas has more school districts, smaller districts, smaller schools, and smaller average class sizes than most other states. In addition, Kansas has relatively high staffing levels to serve its students. Despite these factors that tend to increase costs, Kansas' average spending per student ranked in the middle of all states. Within Kansas, school districts' operating expenditures per student ranged from $\$ 2,900$ to as much as $\$ 11,400$ in 1990-91. Low-enrollment school districts tended to spend the most per student, while larger school districts tended to spend lesser amounts per student for both total operations and administration. Average class size had the largest impact on expenditures per student, and average class size generally rose along with enrollment. Smaller average class sizes meant more teachers per 1,000 students.

Several other states have reduced their total number of school districts during the past decade, but none of the states we contacted could provide specific information about cost savings. The literature we reviewed indicated that minor administrative cost savings may be achieved in school district consolidations; more significant savings can occur only when schools are closed or average class sizes are increased. Throughout this report, it is important to note that consolidation of school districts by itself does not necessarily result in closure or consolidation of schools.

In conducting this audit, we followed all applicable government auditing standards set forth by the U.S. General Accounting Office. We did not verify the accuracy of all data analyzed during the audit, but we did determine whether other agencies had audited or checked the accuracy of the data. In those cases where data were not audited or we had some reason to question the reliability of information used, we noted those limitations in this report.

Before covering the audit findings in more detail, this report briefly summarizes the history about the number of school districts in Kansas.

# History Concerning the Number of School Districts in Kansas 

## Between 1900 and 1970, the Number of School Districts In Kansas Dropped from 9,300 to about 310

In the early years of Kansas' statehood, there was a two-tiered system of school districts, one including elementary schools and another, high schools. This dual system of districts resulted in the establishment of more than 9,000 school districts by the turn of the century.

In the 1940s and 1950s, the Legislature attempted to merge the elementary and high school districts through efforts of county reorganization committees. Those efforts were only moderately successful, partly because the Kansas Supreme Court ruled that the power to create or dissolve districts rested only with the Legislature. By 1958, the State still had about 2,800 school districts, only 237 of which operated both a high school and an elementary school.

The next major school district consolidation effort in Kansas coincided with a national push for consolidation during the 1960s. Legislation passed in Kansas in 1963 divided the State into 106 planning units - one unit per county, with one additional unit in Johnson County. Planning units were responsible for making recommendations for school districts meeting at least one of these two legal requirements:

- An enrollment of at least 400 students in grades 1-12
- At least 200 square miles, and an assessed valuation of at least $\$ 2$ million

The Legislature's consolidation objectives in the 1960s appeared to be to increase efficiency by eliminating elementary-only school districts and sharply reducing the total number of districts. The table below shows the reduction in the number of school districts in this century.

Change in the Number of Kansas School Districts Over Time

| Year | Number of School <br> Districts |  | Average Number of Students <br> Per District |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| 1896 | 9,284 |  | Not Available |
| 1947 | 5,438 |  | Not Available |
| 1958 | 2,794 | 167 |  |
| 1969 | 311 | 1,746 |  |
| 1991 | 304 | 1,398 |  |

Although the number of districts has not changed significantly in the last 20 years, the number of school districts with fewer than $\mathbf{4 0 0}$ students increased from 61 in 1967 to about 100 in 1992. The map on pages 18 and 19 shows all of the Kansas school districts, with districts of fewer than 400 students shaded. At least 25 of the 304 current districts would not meet the standards of the 1963 legislation, because they have fewer than 400 pupils and fewer than 200 square miles.

## How Do the Characteristics of School Districts in Kansas Compare with Districts in Other States?

In general, Kansas is a sparsely populated state with many school districts. Kansas has smaller school districts, smaller schools, smaller classes, and higher staffing levels than other states; these factors normally would tend to increase the amount Kansas spends per student. However, lower than average teacher salaries in Kansas offset these factors somewhat, so Kansas' spending per student was at the mid-point for all states. The most important factors affecting states' average expenditures per student appeared to be average teacher salaries and average class sizes in each state. These and other findings are detailed in the following sections.

## Kansas Has More School Districts, Fewer Students <br> Per District, Smaller Schools and Classes, and Higher Staffing Levels Than Most Other States

The following table shows Kansas' ranking in several areas related to the number and size of school districts. The table also shows the national median and the median for a group of seven states we selected because of their similarity to Kansas in terms of population, population density, and personal income.

## Comparison of Kansas with Other States In Key Educational Statistics, 1989-90

| Kansas Ranked Higher On These Factors.... | Kansas <br> Rank (a) | Kansas | National Median | 7-State <br> Median (b) |
| :---: | :---: | :---: | :---: | :---: |
| Teachers per 1,000 Students | 11 | 66.7 | 59.4 | 56.8 |
| District Staff per 1,000 Students (c) | 15 | 6.0 | 4.8 | 5.5 |
| Total Staff per 1,000 Students | 18 | 116.5 | 112.2 | 107.7 |
| Number of School Districts | 18 | 304 | 186 | 303 |
| Square Miles per District | 23 | 269 | 247 | 317 |
| Kansas Ranked Lower | Kansas |  | National | 7-State |
| On These Factors.... | Rank (a) | Kansas | Median | Median (b) |
| State Population | 32 | 2,513,000 | 3,317,000 | 2,820,000 |
| Total Enrollment (K-12) | 34 | 430,864 | 578,580 | 478,486 |
| Average Number of Schools per District | t 34 | 4.8 | 6.3 | 3.9 |
| Average Enrollment per District | 41 | 1,417 | 2,883 | 1,559 |
| Average Class Size (d) | 41 | 15.0 | 16.8 | 17.6 |
| Average Enrollment per School | 43 | 295 | 462 | 397 |

(a)Rankings are in descending order with the largest number ranked first, and the smallest number ranked 51st. The District of Columbia was counted as if it were a state.
(b)The seven selected states were Arizona, Colorado, Iowa, Nebraska, Oklahoma, Oregon, and Utah.
(c) School district staff includes superintendents, assistant superintendents, and others with districtwide responsibilities. It does not include directors of service areas such as transportation or food service.
(d) Average class size is the same as pupil-teacher ratio.

More complete information and rankings for all states are shown in Appendix A． All nationwide information in Appendix A and in this part of the report is from 1989－90， the most recent year for which comparable data were available．

As the table on page five shows，Kansas has more districts（ranking 18th）and fewer students per district（ranking 41st）than most other states．In the 1989－90 school year， only 17 states had more school districts than Kansas．（The table on page eight shows a list of those states．）Kansas had 304 school districts；the national median was 186. However，the number of districts in Kansas was equal to the median of the seven comparison states．

Kansas is a sparsely populated state，with only 11 states having lower population density．Population sparsity and the large number of districts combine to give Kansas small average enrollments per district．In 1989－90，Kansas had 1，417 students per school district，well below the national median of 2,883 ，and slightly below the median of the seven comparable states．Only 10 states had fewer students per district than Kansas，as shown in the following table．

States with the Fewest Students per School District，1989－90

|  | State | Average Enrollment per District | Total Enrollment | Number of Districts | Average Enrollment per School | Average Class Size | Teachers <br> Per 1，000 <br> Students |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 11 | Kansas | \＃\＃\％ | 430，864 | 304 | 295 | 15.0 | 66.7 |
| 10 | Arkansas |  | 434，960 | 329 | 396 | 17.0 | 58.8 |
| 9 | Iowa |  | 478，486 | 431 | 298 | 15.7 | 63.6 |
| 8 | New Hampshire | ぞ10\％ | 171，696 | 170 | 387 | 16.2 | 61.6 |
| 7 | Oklahoma | 9388 | 578，580 | 604 | 311 | 16.2 | 61.6 |
| 6 | Maine | \％多 | 213，775 | 282 | 286 | 14.1 | 71.1 |
| 5 | South Dakota | 83\％ | 127，329 | 185 | 159 | 15.5 | 64.3 |
| 4 | North Dakota |  | 117，816 | 280 | 174 | 15.1 | 66.3 |
| 3 | Vermont | 343 | 94，779 | 276 | 282 | 13.8 | 72.3 |
| 2 | Nebraska | \％ | 270，920 | 838 | 178 | 14.7 | 68.2 |
| 1 | Montana | 出\％ | 151，265 | 548 | 200 | 15.7 | 63.6 |
|  | nal Median | 2，883 | 578，580 | 186 | 462 | 16.8 | 59.4 |

Kansas also has smaller schools and smaller classes than most other states．As shown in the table on page five，Kansas had an average of 295 students per school in 1989－ 90；only eight states had fewer students per school than Kansas．Kansas＇average class size was 15 ；only nine states and the District of Columbia had smaller classes，on average， than Kansas had．In average school enrollment and average class size，Kansas was substantially below the seven－state median as well．

The table on page five also shows that Kansas had higher than average staffing levels of teachers，administrative staff，and total staff．In all areas we reviewed，Kansas＇
staffing levels were well above both the national median and the seven-state median. Only 10 states had more teachers per 1,000 students than Kansas, and only 17 states had more total staff per 1,000 students than Kansas.

## Despite These Apparent Inefficiencies, Kansas Spends Near the National Median Per Student

Given Kansas' overall ranking in such things as average district enrollment, average school enrollment, average class size, and staffing per 1,000 students, we would have expected Kansas to have higher-than-average expenditures per student in comparison with other states. However, as the following table shows, in 1989-90 Kansas school districts spent an average of $\$ 4,290$ per student, or just slightly below the national median of $\$ 4,357$.

Comparison of Kansas with Other States In Key Educational Expenditures, 1989-90

|  | Kansas <br> Rank |  |  | Kansas |  | National <br> Median |
| :--- | :--- | :--- | :--- | :--- | ---: | ---: |

(a) Operating expenditures do not include expenditures for debt service, capital outlay, or equipment.
(b) The salary estimates in this table, obtained from the National Center for Education Statistics, do not include fringe benefits.

We performed a number of statistical analyses and reviews to determine which factors contributed most to states' school district expenditures, and why Kansas expenditures per student were not as high as we expected. In general, we found that lower-thanaverage teacher salaries offset the other "inefficiency" factors-such as small class sizes and relatively large teaching staffs.

Our analyses showed that average teacher salaries and average class sizes were the two primary factors influencing expenditures per student on a national level. Together, these two factors explained a little more than 90 percent of the variation in states' expenditures per student. Average teacher salary was the single most important factor at this level. The information in the following table can help illustrate the impact of average teacher salaries and average class sizes (which affects the number of teachers) on state expenditures. The table on the following page shows the 17 states with more school districts than Kansas.

## States with the Largest Number of School Districts, 1989-90

|  |  | $\begin{aligned} & \text { Number } \\ & \text { of } \\ & \text { Districts } \end{aligned}$ | Total Enrollment | Average <br> Enrollment per District | Average Enrollment per School | Avg. <br> Class <br> Size | Teachers <br> Per 1,000 <br> Students | Avg. Teacher Salary | Expendi tures per Suden |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | California | 1074 | 4,771,978 | 4,443 | 642 | 22.4 | 44.6 | \$37,625 | अ4\%2 |
| 2 | Texas | 1062 | 3,328,514 | 3,134 | 561 | 16.7 | 59.9 | \$27,400 | \$3834 |
| 3 | Illinois | 964 | 1,797,355 | 1,864 | 425 | 16.9 | 59.1 | \$32,917 | \$4.52. |
| 4 | Nebraska | 838 | 270,920 | 323 | 178 | 14.7 | 68.2 | \$25,522 | 94353 |
| 5 | New York | 12. | 2,565,841 | 3,559 | 642 | 14.7 | 68.1 | \$38,925 | S4051 |
| 6 | Ohio | 613 | 1,767,159 | 2,883 | 476 | 17.4 | 57.5 | \$30,567 | \$4.56\% |
| 7 | Oklahoma | 604 | 578,580 | 958 | 311 | 16.2 | 61.6 | \$23,944 | \$3:297 |
| 8 | New Jersey | 603 | 1,076,005 | 1,784 | 475 | 13.5 | 74.0 | \$35,676 | STM4\% |
| 9 | Michigan | \$6. | 1,576,785 | 2,811 | 476 | 19.7 | 50.8 | \$36,427 | Ssomo |
| 10 | Montana | 548 | 151,265 | 276 | 200 | 15.7 | 63.6 | \$25,081 | \$4.40 |
| 11 | Missouri | 543 | 807,934 | 1,488 | 376 | 15.7 | 63.6 | \$27,229 | Fim\% |
| 12 | Pennsylvania | 501 | 1,655,279 | 3,304 | 505 | 15.7 | 63.7 | \$33,435 | \$3.3\% |
| 13 | Minnesota | 436 | 739,553 | 1,696 | 473 | 17.2 | 58.3 | \$32,190 | \$469\% |
| 14 | Iowa | $\stackrel{431}{ }$ | 478,486 | 1,110 | 298 | 15.7 | 63.6 | \$26,747 | \$4\%0 |
| 15 | Wisconsin | 42\% | 782,905 | 1,825 | 388 | 15.9 | 63.0 | \$32,600 | Sminm |
| 16 | Massachusetts | (1353 | 825,588 | 2,345 | 454 | 14.0 | 71.5 | \$34,175 | Sssi6\% |
| 17 | Arkansas | 329 | 434,960 | 1,322 | 397 | 17.0 | 58.8 | \$22,471 | \$3:29. |
| 18 | Kansas | 304 | 430,864 | 1,417 | 295 | 15.0 | 66.7 | \$27,220 | Fixisi, |
|  | tional Median | 186 | 578,580 | 2,883 | 461 | 16.8 | 59.4 | \$28,986 | \$4,357 |

As the table shows, the three states that had significantly lower expenditures per student than Kansas had were Arkansas (\$3,229 per student), Oklahoma (\$3,297), and Texas ( $\$ 3,835$ ). Arkansas and Oklahoma had much lower average teacher salaries, somewhat larger average class sizes, and fewer teachers than Kansas had. Texas had about the same average teacher salary as Kansas, but its expenditures per student were lower than Kansas because Texas had larger classes, larger schools, and fewer teachers per 1,000 students.

Conversely, the states of New York, New Jersey, Michigan, Pennsylvania, Wisconsin, and Massachusetts all had significantly higher expenditures per student than Kansas had. In all six states, average teacher salaries were much higher than Kansas' average and the national median. In New York, New Jersey, and Massachusetts, average class sizes also were smaller than in Kansas. In states with both high average teacher salaries and low average class sizes (which means more teachers per 1,000 students), expenditures exceeded $\$ 7,000$ per student.

The importance of average teacher salaries and average class sizes also was apparent when comparing Kansas to seven states with similar population, population
density，and per capita income．The following table shows this comparison．Within each column on the table，states are listed from high to low．

Key Educational Statistics for
Kansas and Seven Comparable States，1989－90

| Total Expenditures per Student | Number of School Districts | Average Teacher <br> Salary | Average Class Size | Teachers per 1,000 Students | Average Enrollment per District | Average Enrollment per School |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Oregon } \\ & \$ 4,906 \end{aligned}$ | Nebraska 838 | $\begin{aligned} & \text { Oregon } \\ & \$ 30,842 \end{aligned}$ | Utah 24.8 | Nebraska 68.2 | Utah $10,936$ | Utah 609 |
| $\begin{aligned} & \text { Nebraska } \\ & \$ 4,553 \end{aligned}$ | Oklahoma 604 | $\begin{array}{r} \text { Colorado } \\ \$ 30,758 \end{array}$ | $\begin{gathered} \text { Arizona } \\ 18.9 \end{gathered}$ | \#\#mak そivis | $\begin{aligned} & \text { Colorado } \\ & 3,197 \end{aligned}$ | $\begin{aligned} & \text { Arizona } \\ & 592 \end{aligned}$ |
| $\begin{aligned} & \text { Colorado } \\ & \$ 4,357 \end{aligned}$ | $\begin{array}{r} \text { Iowa } \\ 431 \end{array}$ | Arizona $\$ 29,402$ | Oregon 18.4 | $\begin{aligned} & \text { Iowa } \\ & 63.6 \end{aligned}$ | Arizona $2,553$ | Colorado 421 |
| そiniman |  |  | Colorado $17.6$ | Oklahoma $61.6$ | $\begin{gathered} \text { Oregon } \\ 1,559 \end{gathered}$ | $\begin{aligned} & \text { Oregon } \\ & 397 \end{aligned}$ |
| Iowa \＄4，190 | Oregon $303$ | Iowa \＄26，747 | $\begin{aligned} & \text { Oklahoma } \\ & 16.2 \end{aligned}$ | Colorado 56.8 |  | Oklahoma $311$ |
| Arizona $\$ 3,721$ | Arizona $238$ | Nebraska $\$ 25,522$ | Iowa 15.7 | $\begin{aligned} & \text { Oregon } \\ & 54.3 \end{aligned}$ | Iowa $1,110$ | $\begin{array}{r} \text { Iowa } \\ 298 \end{array}$ |
| $\begin{aligned} & \text { Oklahoma } \\ & \$ 3,297 \end{aligned}$ | Colorado 176 | Oklahoma \＄23，944 |  | Arizona $52.9$ | Oklahoma 958 |  |
| Utah $\$ 2,552$ | Utah $40$ | Utah $\$ 23,652$ | Nebraska <br> 14.7 | $\begin{aligned} & \text { Utah } \\ & 40.3 \end{aligned}$ | Nebraska $323$ | Nebraska $178$ |

Within this group of states，Utah was at one extreme with the lowest average teacher salary，largest average class size，the largest number of students per district and per school，and the lowest expenditures per student．At the other extreme，Nebraska had the most school districts，fewest students perdistrict，smallest schools，and smallest class size of the eight states．Nebraska also had one of the highest expenditures per student．

If Kansas had been at the median of the other seven states on the most important factors－average teacher salary（\＄26，747）and average class size（17．6）－Kansas school districts would have spent about $\$ 127$ million less than they actually spent to operate in 1989－90．The increase in average class size would account for about $\$ 116$ million of that amount．However，if Kansas had been at the median class size of 17.6 students，it would have had about 4，200 fewer teachers．Likewise，if Kansas had been at the seven－state median of 397 students per school，it would have had about 370 fewer schools，which would represent about one－fourth of all schools in the State．

## School District Revenue Sources

As a part of this audit, we reviewed statistics compiled by the National Education Association regarding school district revenue sources for each state and the District of Columbia. We found that these self-reported statistics only included revenue estimates, not actual figures, and that funding mechanisms varied greatly from one state to another. As a result, we are unable to vouch for the accuracy of the reported data. Nonetheless, it is the only comparative information available.

Percentage of Funding from Local, State, and Federal Sources
1989-90

Information from the 1989-90 school year indicated that nearly 51 percent of school district revenue in Kansas came from local sources, compared to a reported national average of 48.6 percent. Only five percent of Kansas school districts' financing originated with the federal government, compared to a national average of 6.4 percent. State funding represented 44.2 percent of Kansas' school district funding, while the national average was slightly higher at 48.6 percent.

The new school funding formula passed by the 1992 Kansas Legislature could produce significant changes in the funding mix for Kansas in the 1992-93 school year.

# To What Extent Does the Enrollment Level in Kansas School Districts Affect the Average Expenditures Per Student and Administrative Costs Per Student, and Why? 

When we examined the relationship between enrollment and expenditures per student, we found that within Kansas, a school district's size has a very strong relationship to both operating expenditures per student and administrative expenditures per student. Generally, the smaller the school district, the higher the cost and the larger the district, the lower the cost. In determining what it was about district size that contributed to these cost trends, we noted several factors. First, the fixed operating costs of a large district are spread over more students. Second, because smaller districts are set-up to serve smaller enrollments, the smaller districts tended to have smaller schools, smaller classes, and more staff per student. These and other findings are discussed in the following sections.

## Elementary and Secondary Education Expenditures Totaled \$2.1 Billion for the 1990-91 School Year

Including debt service and capital outlay, Kansas school districts spent about $\$ 2.1$ billion on elementary and secondary education during the 1990-91 school year. The majority of that amount went to pay for instructional services and about one-third went to fund support services. Instructional services expenditures are teacher salaries and other expenditures to maintain the direct interaction between teachers and students. Support services cover a wide range of activities which supplement the teaching process and include things like student services, instructional support services, district and school administration, transportation, and operations and plant maintenance. Only 3.4 percent of the total went to district administration and 5.7 percent went to school administration.

## School District Enrollment Is a Major Factor Influencing Average Expenditures per Student

The relationship of enrollment to expenditures per student has been studied nationwide. Kansas Inc., a public-private research organization created by the 1986 Kansas Legislature, also studied this enrollment-expenditures per student relationship in 1991, and its research is summarized in the box on page 14. With few exceptions, these reviews have shown that expenditures per student decline as enrollment increases.

Our review of Kansas school districts' enrollments and expenditures also showed that the smaller the school district, the higher the expenditure per student. The chart below shows 1990-91 expenditures per student for Kansas school districts. The small enrollment districts on the left side of the chart had high expenditures per student. As enrollment increased, expenditures per student dropped rapidly and eventually leveled off.

It is important to note that Kansas spent about $\$ 1.9$ billion (excluding debt service and capital outlay) to operate its 304 school districts in 1990-91. On average, Kansas school districts spent about $\$ 4,460$ per student. Individual school districts spent as little as $\$ 2,918$ per student and as much as $\$ 11,400$ per student.

More than one-third of the school districts in Kansas have fewer than $\mathbf{4 0 0}$ students. During the 1990-91 school year, 103 districts- more than one-third of all districts in the State-had enrollments under 400. The map on pages 18 and 19 shows that these small districts are located throughout Kansas and are not confined to any specific geographic area.

The small districts in Kansas spend a larger relative share of the State's educational dollars. As the accompanying table shows, the group of small school districts with enrollments below 400 consumed about eight percent of the education expenditures for 1990-91 and educated about six percent of the students. In contrast, the 41 largest school districts spent 59 percent of Statewide education funding to educate about 62 percent of the students. (A list of all school districts in Kansas, their operating expenditures per student, and other information is located in Appendix B.)

Spending by Enrollment Categories, 1990-91

| Enrollment <br> Category (a) | Number of Districts | Fall 1990 Total Enrollment | Total <br> Operating Expenditures | Median Operating Expenditures per Student |
| :---: | :---: | :---: | :---: | :---: |
| 0 to 400 | 103 | 25,987 | \$151.6 million | \$5,820 |
| \% of Statewide Total | 33.9\% | 6.2\% | 8.1\% |  |
| 400 to 1,900 | 160 | 131,730 | 611.6 million | 4,792 |
| \% of Statewide Total | 52.6\% | 31.6\% | 32.9\% |  |
| More than 1,900 | 41 | 259,563 | 1.1 billion | 3,869 |
| \% of Statewide Total | 13.5\% | 62.2\% | 59.0\% |  |
| Statewide Total | 304 | 417,280 | \$1.9 billion |  |
| Median for All Distri |  | 558 | \$2.7 million | \$4,959(b) |

(a) The enrollment categories presented in this table are based on the enrollment requirements of the 1960s school district consolidation efforts, and the highest enrollment eligible for low-enrollment weighting established in the 1992 school finance package.
(b) This is the median of expenditures per student for all 304 school districts in Kansas. Unless otherwise noted, all other numbers referred to in this report are averages. The average expenditure per student in Kansas for the 1990-91 school year was \$4,460.

As the table on the previous page shows, larger school districts spent less per student than smaller school districts. One explanation for this is that larger districts have more students over which to spread their fixed costs.

All Kansas property taxpayers share in supporting Kansas' 304 school districts, and have a legitimate interest in ensuring that all districts-regardless of their size-are operated efficiently. The fact that small school districts generally spent more per student than larger districts, and therefore spent a greater percentage of available funds than the proportion of students they served, is likely to focus attention on those small school districts in an effort to improve their cost-efficiency.

## Kansas Inc. Reports Concerning School District Consolidation

In 1991, the Kansas Legislature asked Kansas Inc. to conduct statistical analyses of the potential for government reorganization and school district consolidation. Kansas Inc. is a public-private research organization created by the Legislature in 1986. The reports Kansas Inc. issued showed the relationship between school district enrollment and general fund budget expenditures.

In general, Kansas Inc. found a strong correlation between enrollment and general fund budget per student. As enrollment increased, the budget per student tended to decrease. Also, administrative costs showed the same basic relationship. As a side note, the study showed significant variance in budget per student among districts with similar enrollment levels.

Kansas Inc. attributed the decrease in costs that accompanied higher enrollment to economies of scale in education. The study also cited the relationship between the student-teacher ratio and
enrollment levels-as enrollment increased, the stu-dent-teacher ratio also increased.

The study presented four hypothetical examples of the impact of consolidation on total general fund budget and mill levy rates. The report said school district consolidation could save from $\$ 500,000$ to more than $\$ 3$ million in the various examples cited.

As alternatives, the report suggested expanded use of school district consortia and increased state funding for some educational functions like transportation, pre-school, gifted programs, special education, adult education, and literacy programs to provide greater equity and improve program uniformity. The conclusions in the report suggested that State financial aid should not be provided to local units of government which are not economically or administratively viable, and that increasing State aid without changing the local governments or school systems simply perpetuates an inefficient system.

## Low Enrollment Districts Have Higher Expenditures Per Student Primarily Because They Have Smaller Schools, Smaller Classes, and More Staff per Student

We used several forms of statistical analyses and comparisons to determine what it was about small-enrollment districts that caused them to spend more per student. Our analyses and reviews showed that small districts have smaller schools and class sizes, which means more staff per student. The relationship of class size to enrollment level is shown in the chart on the facing page.

The table on the following page shows the 20 school districts with the highest expenditures per student, and the 20 districts with the lowest expenditures per student.

As the top of the table shows, the 20 districts with the highest expenditures all had enrollments under 400 students, and most had small to very small schools and average class sizes, and more staff per student. Nine of the 10 smallest districts in the State are included in this list.

Conversely, the bottom of the table shows that the 20 districts with the lowest expenditures per student had enrollments ranging from 1,600 to 4,300 . These school districts tended to have larger classes, larger schools, and fewer employees for their enrollment level.

School Districts with Highest Expenditures per Student，1990－91

Our analyses for Kansas school districts showed that teacher salaries did not contribute significantly to expenditure variations among districts. For example, 18 of the 20 Kansas districts with the highest expenditures per student paid less than the average Statewide teacher salary, but the lower teacher salaries did not impact expenditures per student as much as expected.

Finally, because district boundaries are fixed, districts currently have fewer options for changing enrollment levels or class or school sizes. Class sizes could be increased by closing schools, but this is not an option for the 97 districts in Kansas that already have only two schools in their district. (In recent years, a number of small Kansas school districts have made attempts to share resources and, thus, reduce costs. These efforts are described in the following question.) Methods for changing school district boundries are explained in the accompanying box.

Some school districts in Kansas are spending more or less than would be ex-

## Three Ways to Change School District Boundaries

State law provides three methods for changing school district boundaries.

Transfer
A portion of a school district may be transferred from one district to another upon written agreement of the two school boards and after approval by the State Board of Education. A school board wanting to transfer land to another district also may petition the State for approval of the transfer. Transfers cannot be made unless the two districts share a border.

## Disorganization

A school district may be disorganized when voters in a district vote to disorganize or, in cases where districts cannot meet State accreditation standards, the local school board asks the State Board of Education to attach the district's territory to one or more adjacent districts.

## Consolidation

The boards of two or more districts may initiate consolidation upon approval of the State Board of Education and the voters in the merging districts.
pected for their enrollment level. Using various forms of statistical analyses and actual school district enrollments, we calculated what each school district might have been expected to spend in the 1990-91 school year. We found that some districts in Kansas spent considerably more or less than the amount expected for their enrollment levels. However, those districts spending more than expected were not necessarily the smallest school districts, and those spending less than expected were not always the largest districts. A list of all school districts in Kansas, their operating expenditures per student, the percentage expenditures varied from expected, and other information is located in Appendix B. This type of analysis was also performed in the January 1991 report, Analyzing the Relationships Between Funding Levels and the Ouality of Education in Kansas School Districts.

## KANSAS UNIFIED SCHOOL DISTRICTS

Districts with fewer than 400 students and the highest level of spending per student in the 1990-91 school year.
$\square$ All other school districts with fewer than 400 students in 1990-91.

## -- 1991-1992 SCHOOL YEAR

## School District Enrollment, Class Size, and School Size Also Are Major Factors Affecting Administrative Costs Per Student

For the 1990-91 school year, school districts in Kansas spent \$184.6 million-or about 10 percent of total operating expenditures-for administration. The median administration expenditure per student was $\$ 613$; however, individual school districts had administration expenditures per student ranging from $\$ 230$ to as high as $\$ 2,412$. Total administration costs in a school district are made up of district administration and school administration expenditures. (Definitions of these terms are in the box on the facing page.) About $\$ 67.4$ million ( 37 percent) of total administration expenditures was for district administration, and $\$ 117.1$ million ( 63 percent) was for school administration.

We again performed numerous statistical analyses and comparisons to determine what it was about small enrollment districts that caused them to spend more per student on administration. Our work showed that average class size, total staff employed by a district, and school size appeared to be important indicators of a district's administration expenditures per student. As might be expected, these were the same factors that played a significant role in determining operating expenditures per student in school districts.

As district enrollment, average class size, and school size increased, administrative expenditures per student tended to decrease. The following table illustrates the impact of district size on administrative expenditures as a percent of total expenditures and on administrative expenditures per student.

Enrollment Categories
Small school districts tend to spend a larger portion of total operating expenditures on administration than large districts. On a Statewide basis, about 10 percent of elementary and secondary education expenditures were for administration.

## Definition of Administration Expenditures

Total administration expenditures in a school district are made up of district administration and school administration expenditures.

District Administration expenditures are for all activities concerned with establishing and administering policy for operating a school district. District administration includes expenditures for the board of education staff, the board secretary or clerk, staff relations and negotiations services, the superintendent, superintendent's staff, assistant superintendents, area directors, legal services, audit services, and the chief business officer for the district.

School Administration expenditures are for activities concerned with the overall administrative responsibility for a school. School administration includes expenditures for the principal, vice- principals, other assistants, department chairpersons, and office staff for those officials.

In this audit, we combined school administration and district administration into one number representing total administration for the district. We found some school districts had reported district or school administration expenditures under the wrong category, and using one total for both types of administration would eliminate the reporting errors.

## Administration Expenditures for the 1990-91 School Year

| Enrollment Category | District Administration Expenditures | School Administration Expenditures | Combined Administration Expenditures | Median Expenditures per Student |
| :---: | :---: | :---: | :---: | :---: |
| 0 to 400 | \$10,728,864 | \$10,273,876 | \$21,002,740 | \$788 |
| 400 to 1,900 | 31,125,159 | 41,575,508 | 72,700,667 | 573 |
| More than $\mathbf{1 , 9 0 0}$ | 25,594,263 | 65,260,787 | 90,855,050 | 393 |
| Statewide Total | \$67,448,286 | \$117,110,171 | \$184,558,457 |  |
| Median for All Districts | \$152,532 | \$185,794 | \$344,279 | \$613 |

As the bar charts and the table above show, larger school districts spent less of their total budget on administrative expenses, and generally spent less per student on administration. This occurs because of economies of scale that allow the larger districts to spread these costs over larger numbers of students.

Even if administrative costs in small districts could be decreased substantially, those costs are not a large part of total educational costs in Kansas. As pointed out in the table above, the school districts in Kansas with fewer than 400 students spent a total of $\$ 10.7$ million on district administration costs for 1990-91. Even if those costs could be eliminated entirely, that would represent less than one percent of total elementary and secondary education expenditures in the State. Several studies indicated it is likely that any administrative cost-savings would be exchanged for teacher salary equalization and improved curriculum in the consolidated districts.

## Wide Variance in Administrative Expenditures per Student

In 1990-91, total administrative expenditures per student among the 304 school districts ranged from $\$ 230$ to as a high as $\$ 2,412$. The economical advantage of large school districts is demonstrated below, using the hypothetical example of a superintendent's salary.

| Superintendent <br> Salary | District <br> Enroliment | Effect on <br> Expenditures <br> per Student |
| :---: | :---: | :---: |
|  | 40,000 | 100 |
| $\$ 50,000$ | 250 | $\$ 400$ |
| $\$ 50,000$ | 500 | $\$ 200$ |
| $\$ 50,000$ | 1,000 | $\$ 100$ |
| $\$ 100,000$ | 10,000 | $\$ 50$ |
| $\$ 120,000$ | 40,000 | $\$ 10$ |
|  |  | $\$ 3$ |

The figures shown above are for illustration purposes only, and do not reflect the fact that larger school districts are likely to have assistant superintendents and other specialized administrators that smaller districts would not have.

# Have Other States Found That Consolidating School Districts Resulted in Cost Savings? 

In general, the other states we surveyed had not studied the financial results of consolidation, but estimated that consolidating school districts resulted in only minor administrative cost savings. State education officials told us that significant savings resulted only when schools were closed, class sizes were increased, and the number of teachers was reduced. In the states we surveyed, consolidation was not mandated by the state legislature. However, many states instituted either financial incentives or expanded curriculum requirements that encouraged districts to consolidate.

## Other States Reported that Consolidating School Districts Resulted in Minor Administrative Cost Savings

Over the past decade, a number of states have reduced the number of school districts in their states. We contacted six states that showed significant reductions in their total number of school districts. The six states we contacted and the number of districts eliminated are shown in the following table.

| State | Number of Districts |  |
| :--- | ---: | :---: | :---: |$\quad$| Total Number of |
| :---: |
| Districts Eliminated |

None of the states we contacted had done a formal study of the cost savings resulting from consolidation. Education officials in these states reported that decreases in the number of school districts did not significantly impact statewide expenditures per student. Several reasons were cited regarding the lack of significant savings. An Iowa official indicated that financial incentives given by the state to encourage consolidation offset any savings from consolidation. Officials from several states told us that consolidation generally increased teacher salaries to the level of the highest paying district, thus reducing or eliminating savings in administrative costs. In general, savings resulting from consolidation were immediately invested in improved instructional programs. Some state officials told us that minor savings may have been realized in administrative costs, or that administrative costs may have increased at a slower pace following consolidation.

## An Alternative to Consolidation: One Superintendent per County

Kansas has 304 school districts and only 105 counties. Rather than having an average of three superintendents in each county, Kansas could have one superintendent per county.

The average salary for a superintendent in $1990-91$ was about $\$ 58,730$. The impact of a superintendent's salary on expenditures per student is illustrated in the box on page 22. Having one superintendent per county would eliminate 199 positions and would reduce district administration expenditures for superintendent's salaries by about $\$ 11.7$ million, but that would be less than one percent of total operating expenditures.

Most states reported that significant cost savings were realized only through closing schools, increasing class sizes, and reducing teaching staff. An Oklahoma education official indicated that consolidation of districts and schools sometimes resulted in a doubling in high school class size. Arkansas' consolidation efforts brought large reductions in teachers and closure of school buildings.

Our extensive review of academic literature regarding consolidation appeared to support the information we received from other states. Published research indicated that cost savings are not significant until large-scale consolidation occurs, involving school closings, increased class sizes, and reduced staffing levels.

# One Approach to Reduce State Costs and Encourage Consolidation 

A Kansas State University College of Education doctoral student completed a dissertation in 1992, focusing on geographical and enrollment factors in Kansas school districts. The dissertation proposed that special funding, such as the lowenrollment weighting factor of the 1992 school finance legislation, be given only to school districts having all of the following characteristics:

- an enrollment size of less than 500
- one high school in the district
- a distance of 10 miles or more by hard surface highway from the district's high school to the nearest high school in an adjoining district

The theory being applied here is that these districts are maintaining small high schools by choice, rather than by necessity.

Under this scenario, 55 Kansas districts would no longer be eligible for low-enrollment funding. Of those 55 districts:

- seven districts have two high schools in one district.
- 48 districts have a high school within 10 miles of the nearest adjacent high school in an adjoining district.

Of these 55 districts, 24 are located in western Kansas and 31 are in eastern Kansas.

This plan, similar to ones used in other states, would not impose mandatory consolidation. Rather, it would eliminate an amount of funding given to some of the small districts, which might encourage the districts to consider consolidation.

## State Incentives Encouraging Consolidation of Districts Took Two Forms - Monetary and Curriculum-Based

In the six states we surveyed, the reduction in the number of school districts during the past ten years was not mandated by their state legislatures. Instead, a variety of incentives were offered, or educational programming requirements were instituted, that led districts to merge.

Education officials from several states told us that the goals of consolidation were expanded curriculum offerings or increased staffing levels. These goals did not require consolidation, but served to encourage the small enrollment districts to consolidate in order to comply with new requirements or demands from school district patrons.

Several states have developed innovative ways for small school districts to share resources, thereby avoiding or delaying consolidation. Some small Iowa school districts have been able to meet expanding education program requirements through "whole-grade sharing." Whole-grade sharing allows school districts to become partners with other districts, sending and receiving whole grades of students. As of July 1992, 121 Iowa districts were participating in whole-grade sharing. Also in Iowa, about 120 districts were sharing their superintendent with another district. Both whole-grade sharing and superintendent sharing have proven to be first steps toward district consolidation in Iowa.

In an effort to stretch limited dollars and expand educational opportunity, Kansas school districts have developed some innovative and creative approaches to educating the State's students.

- 50 two-way video classrooms have enabled teachers to teach students in two or more buildings at the same time.
- School districts have cooperated to develop regional service centers offering cooperative purchasing, drug prevention education, film/video libraries, and special education services to numerous districts.
- Sharing job duties is another way school districts stretch limited dollars. In Kansas, 46 superintendents also acted as principals and 170 principals served more than one school in 1991-92.
- Four school districts in southwest Kansas are participating in whole-grade sharing. Declining high school enroliments prompted the Mullinville and Copeland districts to send their high school students to neighboring districts. Mullinville sends children in grades 9-12 to Greensburg, about 8 miles east of Mullinville. Greensburg sends its seventh and eighth graders to Mullinville. The 1992-93 school year will be the third for this sharing arrangement. The Copeland and Montezuma districts are about to begin their second year of a similar sharing arrangement.
- The 1992-93 school year provides Kansas' first experiment in superintendent-sharing in the Grainfield and Quinter districts. Several other districts also are exploring this cost-saving option.

Because Nebraska had many small districts containing only elementary schools, many districts participated in a form of whole-grade sharing by sending all grades of students to a neighboring district. Sharing a principal between schools in small elementary districts also has been done in Nebraska.

Arkansas and Nebraska school district officials have found that teacher-sharing among districts allows small districts to provide expanded curriculum. Teacher-sharing involves teachers traveling between districts in order to teach a particular subject.

Kansas school districts have developed a number of similar innovations in recent years, as described in the box above.

## Conclusion

All Kansas taxpayers have an interest in seeing Kansas' school districts operated efficiently and effectively. Larger school districts generally educate students at a lower cost per student, because larger districts have more flexibility to establish larger classes and larger schools. In 1990-91, the most cost-efficient school districts in Kansas had enrollments between 1,600 and 4,300 students. While larger classes and larger schools reduce the amount spent per student, most of the literature in the field says that smaller classes and smaller schools improve the quality of education provided to children.

In Kansas, as in other states, the most likely candidates for school district consolidation are districts with low enrollment and high cost per student. More than 100 of Kansas' 304 school districts have fewer than 400 students each, and those districts spend substantially more per student than larger districts spend. However, the districts with fewer than 400 students had only 6.2 percent of the Statewide enrollment, and spent only 8.1 percent of all operating funds in 199091. Therefore, even if savings could be realized through school district consolidation or school consolidation in those small districts, those savings would not likely have a significant effect on the overall State funding for primary and secondary education.

Consolidating school districts is a complex matter, involving a variety of issues, especially when accompanied by the closure or consolidation of schools. The work done in this audit suggests that consolidating school districts can reduce administrative costs, but more significant savings occur only when schools are closed and average class sizes are increased. Those kinds of changes would take time to accomplish, and could cause significant social and economic consequences. There is more at stake than cost-efficiency alone, even though that is a major consideration for State and local elected officials. Individual case studies would have to be done to determine whether cost savings in one area (such as administration) would or would not be offset by higher costs in other areas.

It is clear that the Kansas Legislature has the power to change the requirements imposed on school districts, or to establish a minimum enrollment level that every district must have. In many of the low-enrollment school districts, having larger school districts and higher enrollment levels would provide a greater opportunity for districts to become more efficient-meaning larger schools and larger classes-over a period of time. Whether that opportunity is exercised would be up to local school boards, operating within legal mandates and political realities.

## APPENDIX A

## Spending and Staffing Information on All States and the District of Columbia

This Appendix shows 1989-90 data for all 50 states and the District of Columbia, listed in alphabetical order. The rankings shown for each item are from highest (ranked 1) to lowest (ranked 51). The data shown in this Appendix were obtained from a variety of publications, including the annual Digest of Education Statistics published by the U.S. Department of Education.

## APPENDIX B

## Spending and Staffing Information on All 304 Kansas School Districts

This Appendix shows 1990-91 data for all 304 Kansas school districts, listed in alphabetical order. The rankings shown for each item are from highest (ranked 1) to lowest (ranked 304). The data used to compile this Appendix were obtained from the State Board of Education.

| District Name | Number | Fall 1990 <br> Enrollment | Rank | Operating Expenditure per Student | Rank | \% Actual Expenditures More or (Less) than Expected | Superintende Salary | Rank | Average Principal Salary | Rank |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Abilene | 435 | 1,375.0 | 59 | 4,161.58 | 255 | (2.18\%) | 70,620 | 29 | 49,270 | 41 |

## APPENDIX C

## Agency Response

On August 7, 1992, we provided copies of the draft audit report to the Commissioner of the State Board of Education. The Commissioner's response is included as this Appendix.

Ms. Barbara Hinton
Legislative Division of Post Audit
Merchants Bank Tower
800 S.W. Jackson, Suite 1200
Topeka, Kansas 66612-2212
Dear Ms. Hinton:
We appreciate having the opportunity to review the draft copy of your completed performance audit report, Exploring Options for Consolidating Kansas School Districts: An Overview.

It appears that you have reviewed the issues with which the Kansas Legislature will be confronted if consolidation is considered in the future.

LD: DMD: tjm

[^0]:    (a) The Fort Leavenworth school district is located on the U.S. government military base in Leavenworth County and is about 9 square miles.
